Questions:

- **Compare the planned velocity with the previous sprint velocity**
 - Regarding the Sprint Velocity, we had a lot of items left in our backlog, since we have more than 25 base features (more than required).
 - In terms of completion, we had a productive sprint and completed 112 items this sprint, in comparison to sprint 2!
 - We have a couple features left over, but the important core features are all implemented.
- **Explain why your velocity did change (or why it did not change)**
 - The velocity changed a lot because we took on all the tickets that were left in the backlog.
 - We also worked harder, and completed more tickets this sprint.
