Sprint burndown chart

[How to read this report](#)

Questions:

- **Compare the planned velocity with the previous sprint velocity**
 - So We just shifted from the Old JIRA to New JIRA, so we can't access our old velocity, but It was 100% completed, and 100% completed this time.
- **Explain why your velocity did change (or why it did not change)**
 - Our Velocity did not change because our group is hard workers who bite on how much they can chew. We kept up with JIRA and each other in completing the task.

Because of the shift, story points did reset, so we started sprint before putting in the estimation, so the Graph is not fully accurate.
